

Plant food. A farmer can buy two types of plant food, mix A and mix B. Each cubic yard of mix A contains 20 pounds of phosphoric acid, 30 pounds of nitrogen, and 5 pounds of potash. Each cubic yard of mix B contains 10 pounds of phosphoric acid, 30 pounds of nitrogen, and 10 pounds of potash. The minimum monthly requirements are 460 pounds of phosphoric acid, 960 pounds of nitrogen, and 220 pounds of potash. If x is the number of cubic yards of mix A used and y is the number of cubic yards of mix B used, write a system of linear inequalities that indicates appropriate restraints on x and y . Find the set of feasible solutions graphically for the amounts of mix A and mix B that can be used.

		Ph Ac	Nit	Potash
x	A	20	30	5
y	B	10	30	10
MIN		460	960	220

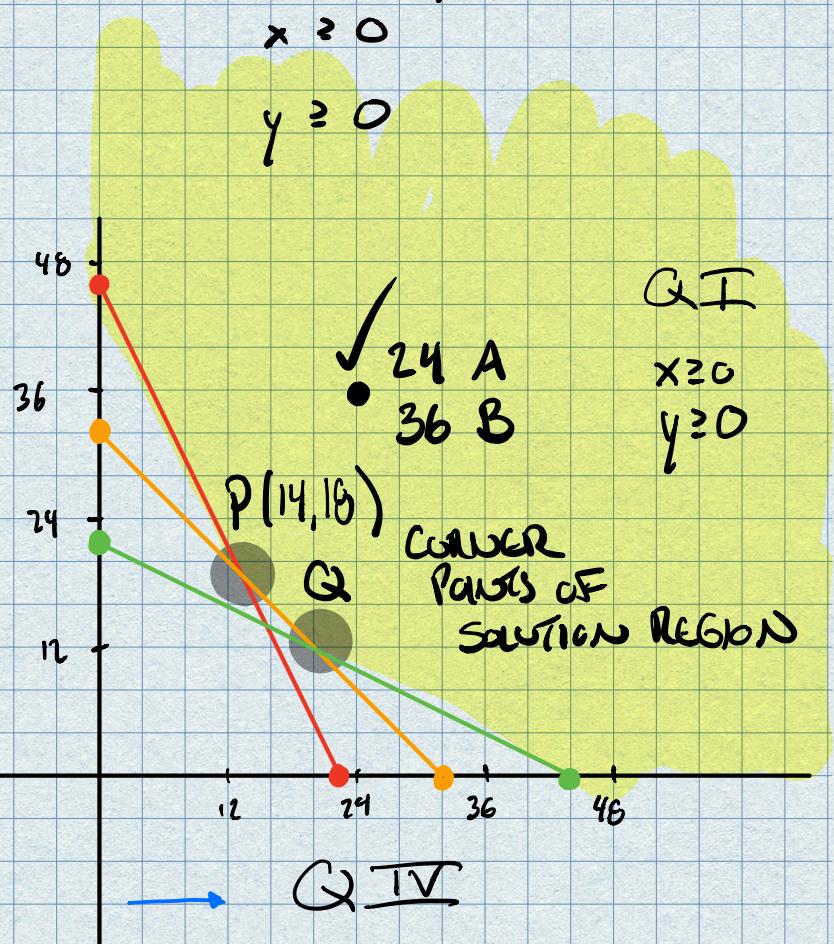

$$\begin{aligned} \text{TOTAL Ph Ac : } & \left\{ \begin{array}{l} (20x + 10y \geq 460) \div 10 \quad 2x + y \geq 46 \\ (30x + 30y \geq 960) \div 30 \quad x + y \geq 32 \\ (5x + 10y \geq 220) \div 5 \quad x + 2y \geq 44 \\ x \geq 0 \\ y \geq 0 \end{array} \right. \end{aligned}$$

$$\begin{aligned} 2x + y \geq 46 & \bullet (0, 46) \\ x + y \geq 32 & \bullet (23, 0) \\ x + 2y \geq 44 & \bullet (0, 32) \\ x \geq 0 & \bullet (0, 22) \\ y \geq 0 & \bullet (44, 0) \end{aligned}$$

SOLVE

P: INTERSECTION OF $\begin{cases} 2x + y = 46 \\ x + y = 32 \end{cases}$ } SOLVE THIS SYSTEM

$$\begin{aligned} & x + y = 32 \\ & \downarrow \\ & y = 32 - x \end{aligned}$$

$$2x + (32 - x) = 46 \quad (\text{NO } y)$$

SOLVE FOR x :

$$\begin{aligned} x + 32 &= 46 \\ x &= 46 - 32 = 14 \\ y &= 32 - x = 32 - 14 = 18 \end{aligned}$$

$P(14, 18)$

LINEAR INEQUALITIES : BOUNDARIES TO SOLUTION

REGIONS (EQUATIONS) ARE ALL STRAIGHT LINES .

NON-LINEAR INEQUALITIES

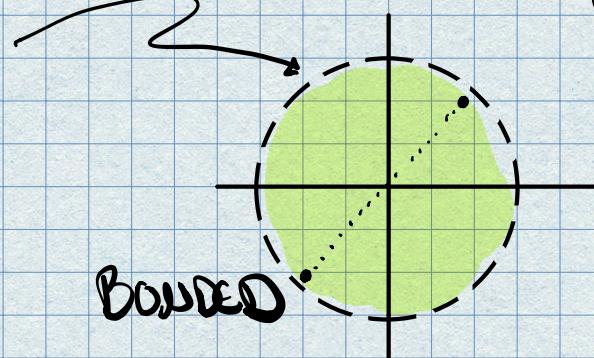

$$x^2 + y^2 < 1$$

GRAPH SOLUTION REGION

Boundary: $x^2 + y^2 = 1$
